CCE 56

Product Group	Counterfeit Detector	Tools

The most important features

Level of counterfeit detection:
basic

UV LED for UV security features

Standard currencies:
universal for many currencies

Can also be used for documents, ID cards and UV stamps

Activation of UV LEDs by sensor

Introduction

Equipped with two 6-watt UV-LED illuminators, the CCE 56 enables reliable verification of the UV security features of banknotes, ID cards and other documents. The use of LED technology ensures a long service life and low energy consumption. An integrated sensor automatically activates the UV light as soon as a document is held in the test area and switches it off again after the test, which further reduces energy consumption.

The CCE 56 can be used universally for many currencies and is therefore ideal for international payment transactions. In addition to checking banknotes, it can also be used to verify ID documents and other security documents.

Please note that checking banknotes only on the basis of UV light does not provide complete protection against counterfeit money. For more comprehensive counterfeit money detection, it is recommended that additional checking methods be used or electronic counterfeit money detectors such as the CCE 10, CCE 20, CCE 22 or CCE 30 models, which check several security features at the same time.

CCE 56

Product Group	Counterfeit Detector	Tools

Characteristics	
Level of counterfeit detection	Basic
US-Dollar processing	✓
Type of display	-
Mobile use possible	✗
Standard software	Universal
Other currencies available	Universal
Functions	UV power-saving mode, activated by sensor

Technical features	
Dimensions	160 x 100 x 95 mm
Weight	0,265 kg
Power consumption	6 W
Power connection	110 - 230 V / 50 – 60 Hz.
Warranty	12-month warranty, no warranty on bulbs
Certification	CE
